Mini Install Guide

TRANSIT Ultimate

Quick Install Sheet

Out of the box, the reader is set to output Wiegand 26 with FC of 10 with Dipswitches 2, 6, and 7 "OFF".

Can be changed at the reader level.

Power Supply:

Linear 24vdc 2-3 AMP

Cabling:

Shielded twisted 6 (18-22 Gauge) for communication wiring. A separate pair (14-18 Gauge) for the power supply.

Wiring and Communication:

GND C-2 0-3

Grounding:

Continuity is created by landing a jumper between the 12v ground powering the access control panel to the 24v ground powering the reader.

Additional Resources: support.nedapidentification.com

Orientation:

Horizontally (normal application) the reader emits an 80-degree wide by 40-degree high oval beam. Vertically the reader emits a 40-degree wide by 80-degree high beam. This is recommended for multi-lane applications to prevent cross talk.

Tag Enrollment:

Out of box the reader is set to output W26 with the FC of 10. The orange circle is the 6-digit W35 or higher ID number. The blue circle is the 5-digit W26 ID number. Do not include the dash or number after the dash.

Best practice is to mount the reader 4-6 ft above the highest tag placement and angle the reader down and across (45 degrees) the read lane.

Tag Placement:

Metalized content will block tag signals. Best practice is to utilize external mount tags for this occurrence.

LPR LUMO

Quick Install Sheet

The software is embedded in the camera. No additional license fees. See manual for additional wiring information.

Power Supply:

Linear 24vdc 2-3 AMP

Cabling:

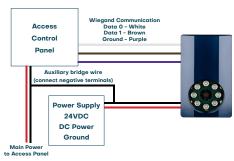

Shielded twisted 6 (18-22 Gauge) for communication wiring. A separate pair (14-18 Gauge) for the power supply.

The LUMO comes with a wiring harness and network connection from the reader.

Grounding:

Continuity is created by landing a jumper between the 12v ground powering the access control panel to the 24v ground powering the reader.

Connecting to the LUMO:

Default address is 192.168.3.15. Default username is "admin" and the password is "secret". This will bring you to be able to set up and configure the reader using an easy-to-use web interface. More details are in the installation guide.

Installation Height:

Best practice is to mount the reader at license plate height (can be installed up to 14 ft high) and no greater angle than 25 degrees down a single lane. If the State does not require front plates the same applies but pointing towards the back plate.

Scan the QR Code for additional resources.
